

HeathCo® Launches New Line of Heath®/Zenith Motion Activated Light Switches - Now CFL, LED and ELV Compatible

New Capabilities Provide the Most Energy Efficient Lighting Control Available

Bowling Green, KY - July 6, 2011 - In tune with the increasing number of homeowners and businesses gravitating towards more energy-efficient and high-performance lighting options, HeathCo® introduces CFL, LED and ELV capabilities to their line of Heath®/Zenith motion activated wall switches. This progressive product advancement equips distributors and retailers with solutions to meet all their customers' lighting needs.

"Having CFL or LED bulbs in a room isn't enough anymore," states Ryan Craig, Product Manager for Heath®/Zenith. "By combining intelligence of a motion activated light switch with the energy efficiency of new bulb types, consumers can enjoy significantly lower energy bills than with CFL bulbs alone."

Designed to turn on once motion is detected and off after motion ceases, the new CFL, LED and ELV-compatible motion light switches eliminate worries about leaving lights turned on for too long. The new line consists of three different models in both white and ivory finishes. Model SL-6117 features a 150 degree detection zone with three-way light control, photocell adjustments and a selectable ON time ranging between five and 30 minutes, while the SL-6115 has the same features, but replaces three-way control for a single-pole switch. The SL-6113 is the entry level switch featuring a 110 degree detection zone.

These new motion switch capabilities allow electrical distributors and retailers to fill a gap where consumer demand is growing fastest. "Previously, consumers would be forced to return the switch or call back the electrical contractor when their motion switch wouldn't work with their energy efficient lighting," says Booth.
